---

Hi guys so I'm planning on moving back to the Xbox One X when it comes out but currently do not have a system.. I saw you can download a driver for the regular xbox one controller, just was not sure if the same applied for the elite controller.

I have a good deal on an elite controller and was wondering if I would be able to use it on a Mac to play CS GO via Steam? I'd really like to purchase it now as the deal will pass, but prefer to buy it only if I can use it now (as I've heard there have been issues with the product).
